

Object Oriented Programming Project: Part 2
Birthday Tracker

Name: Sara Hyo Park

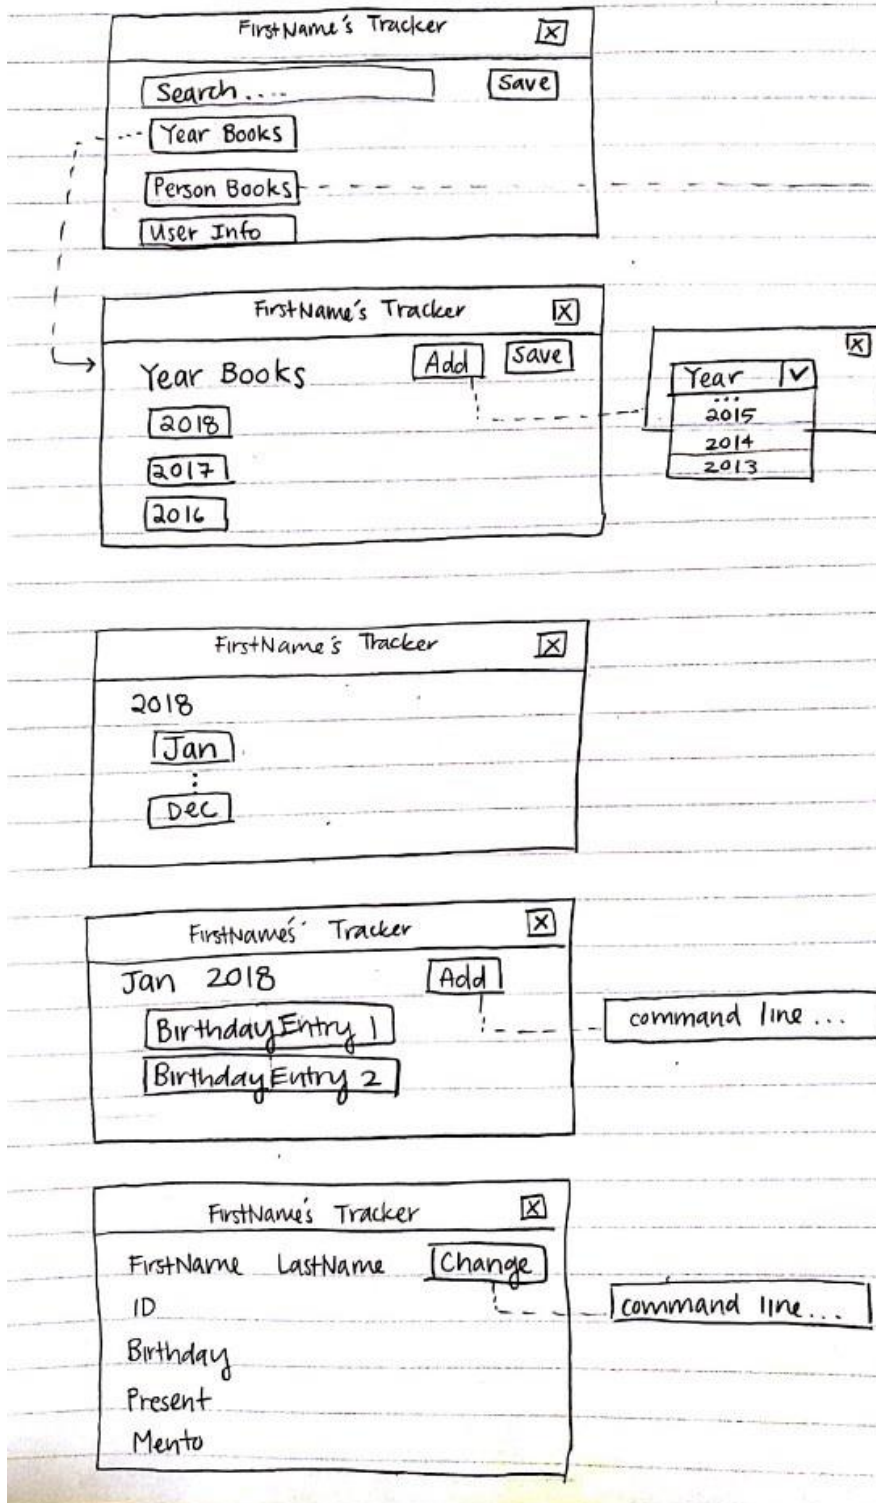

Title: Birthday Tracker

Summary: Birthday Tracker will be an application that allows users to store the birthdays of their friends and presents that they have given them. The application will have year books in which past presents or future presents can be stored. The user can search for a friend's birthday via name, month, and/or date.

Requirements:

1	User can select to open Year Books, Person Books, or User Info
2	User can add and delete a person's birthday information in Year Books or Person books
3	User can edit birthday information: name, date of birth
4	User can add past presents information in Year Books
5	User can search for a friend's birthday via name, month, and/or date
6	User can add presents to a certain year book, whether past, current, or future.
7	User delete year books or person books
8	User can save or discard changes when user tries to quit application
9	User can see user name at top of application
10	User can change user info
